Med Outcomes Data- Faculty Review Summary

1. Following a series of meetings to discuss program curriculum, two themes emerged:

   a) Graduate students would benefit from an extended internship experience. The faculty agreed to increase the PEP 7550 Internship credit from 3 to 6 credits;

   b) Since this degree is a practitioner’s degree rather than a research-focused degree, removing the PEP 6810 research methods course was approved and replaced by a course (HEP 5400) focusing on topics of interest for coaches and Physical Education teachers (Health, weight control and strategies to improve physical activity habits).
